MODIFICATION OF
ORDER OF REINSTATEMENT
OF APRIL 20, 2000

)
Licensed to Practice Dentistry)
in the State of New Jersey)
_____)

CERTIFIED TRUE COPY

This matter was opened to the New Jersey State Board of Dentistry ("Board") upon the application of Donald Dobrowolski, D.D.S. ("respondent") through Raymond F. Hanbury, Jr., Ph.D., respondent's treating psychologist, seeking to modify the terms of the order of reinstatement to permit randomization of urines. The Board's order of April 20, 2000 required that respondent submit to urine monitoring for each day that he engaged in the practice of dentistry, but in no event less than once a week. Dr. Hanbury has advised the Board that respondent has had fifteen months of clean urine specimens and that, in his opinion, respondent's recovery would be better served by random urines screened once or twice a week. Respondent has been averaging 10 to 13 urine screens a month.

Based on the information submitted, the Board has determined that the public health, safety, and welfare will continue to be served by a reduction in the number of urine screens required. Respondent has demonstrated a continuing commitment to his recovery. The Board believes that by maintaining a frequency requirement of six (6) screens per month, respondent will be adequately and indeed more randomly monitored. At this time, the Board believes that all other terms of its order of April 20, 2000 should remain in effect.

IT IS ON THIS 16th DAY OF APRIL, 2001

ORDERED:

1. The provisions of paragraph 1 of the Board's order of April 20, 2000 are modified to reflect that respondent shall submit to urine monitoring consistent with the terms of that order not less than six (6) times per month. Any urine specimen that reflects low creatinine and low specific gravity may be deemed a positive urine for purposes of Board action.

2. All other terms of the Board's order of April 20, 2000 remain in effect and are incorporated here by reference.
